

This table setup is easy to follow but complex enough to allow for an organized adoption agency structure.

users		
Can't adopt animals without credentials. No null values allowed here		
 id	integer	
email	varchar(100)	
password	varchar(20)	
admin	boolean	
first_name	varchar(60)	
last_name	varchar(60)	
address	text	

applications		
users have to fill out applications to be approved by admin for adoption. That admin's id is recorded upon approval		
 id	integer	
user_id	integer	
animal_id	integer	
approved	boolean	
pending	boolean	
comments	text(255)	
submit_date	datetime	
admin_id	integer	

animals		
animals have a user_id that is null at first, then populated when their adoption application is approved		
 id	integer	
species_id	integer	
name	varchar(60)	
gender	varchar(60)	
age	integer(3)	
adopted	boolean	
user_id	integer	

species		
holds the different species to pull from		
 id	integer	
name	varchar(60)
